#### **DETAILED ACTION**

#### Continuation of 11:

1. Applicant's arguments filed 01/04/2007 have been fully considered but they are not persuasive.

Regarding the applicant's argument that Heo teaches transmitting a number of message segments and the order of the message segments, and does not teach transmitting the slot position of the second information. (see page 9 of the remarks); the examiner respectfully disagrees. The applicant acknowledges that a segment count and segment field is added in a broadcast reference slot (see Figure 8). This information is used to determine position of a message intended for a mobile terminal, and therefore Heo meets the limitation recited in the claims, since the sequence and segment count can be seen as a first information used to determine position of a second information. Furthermore, while Heo shows many aspects of segmented message broadcast, Figure 7 also shows the segment count and segment sequence used during non segmented messages provided that there is room for transmission within a target slot (steps S3 and S4).

Regarding the applicant's argument that Lee does not transmit first information indicating the position of second information in a target slot as recited in claim 13, rather Lee places subsequent messages in particular slots and does not transmit the location of the slots. (see page 9, last paragraph); the examiner respectfully disagrees. While, Paragraph 10 shows an embodiment of Figure 1 wherein the location of the broadcast message corresponding to the broadcast page is in slot location 3 X n, Paragraph 6

10/702,208

Art Unit: 2617

teaches that "the base station informs a terminal of information for transmitting the data burst message using a broadcast page record. In this case, the data burst message is a broadcast message transmitted through a paging channel, and a broadcast page is a record in the general page message so as to inform a mobile station that a broadcast message is transmitted to which location of a slot at a slotted mode." Therefore, a page record (first information) is used to alert a mobile station the location of a slot that contains a broadcast message (second information) in a slotted mode.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ariel Balaoing whose telephone number is (571) 272-7317. The examiner can normally be reached on Monday-Friday from 8:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Trost can be reached on (571) 272-7872. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
